

# Collect and Validate High Accuracy Survey Data On the Fly - With Ease

Accelerates transformation of survey data points into polygons by allowing validation on your mobile device.

## Create Job

Organizes the Survey Workflow into discreet tasks.

## Collect Re-order

Captures highly accurate survey points and POI information. Capable of visual review and re-ordering of points.

## Verify Polygon

Validation of field information and polygon shape on screen in the field.

# ParcelSurveyor™

## Submit

Upload field data directly into ArcGIS.

# Unifies Workflow from Field Data Collection to Map Production

## Additional Functions

- Reuses survey points already collected for neighboring parcels, reducing field collection time and preventing gaps and slivers.
- Prevents the collection of survey points if another exists within predefined spatial extent/tolerance.
- Stores important metadata such as GPS accuracy, device type, etc. than can be used to augment the survey.
- Collects predefined cadastral details used for cadastral reference.
- Supports 3D Cadastre.

## Coming soon:

- Android platform
- Works with any Bluetooth GPS
- Connected or disconnected
- Supports ArcGIS Online
